CyberLock Offers Three Intelligent Key Management Cabinets

Corvallis, Oregon, May 01, 2013—CyberLock, Inc., a supplier of key-centric electronic access control systems, offers intelligent key cabinets for secure storage and management of electronic smart keys.

CyberLock offers three robust key vaults; the CyberKey Vault 1, CyberKey Vault 20 FX, and CyberKey Vault WR. Smart keys stored in the vaults are unprogrammed until an authorized user presents the proper credentials (either an RFID card or PIN). When the authorized access is granted, a key is then programmed with the user's access permissions and released from the vault.

CyberKey Vaults are beneficial for users who want to automate the process of checking in and out keys. The management software tracks when a CyberKey is dispensed, when it returns, and provides a report of the key's audit trail to keep employees and contractors accountable.
