

## **CyberLock – Access Control On The Go!**

Corvallis, Oregon – September 2017

CyberLock is a unique key-centric access control solution and a viable option for most applications as it offers traditional access control results for both conventional (doors) and unconventional (gates, cabinets, drawers, padlocks) security needs. Along with system benefits such as audit trails, key-control, and access schedules, CyberLock also features easy, wire free installation, minimal maintenance, scalability, affordability (vs card access), user-friendly interface, and a wide selection of hardware and software features.

CyberLock's latest innovative key design, The CyberKey Blue 2 offers access control on the go! With Bluetooth 4.2 technology, CyberKey Blue 2 pairs with any smart device running the CyberAudit Link App. This technology allows key users to update permissions on the go. Internal memory contains access codes, a list of up to 12,000 locks it may access, schedules of authorized dates and times it may access, and a begin-end date range, during which the key will operate.

The CyberKey Blue 2 is a great option to control access in mobile EMS situations. From narcotic safes to emergency vehicle storage units, the CyberLock system allows management to control when and where access is granted to key holders. Additionally, it allows key holders to use their phones or a Bluetooth enabled device to update their permissions or download the audit trail from their key to the software.

CyberLock will attend the EMS World TradeShow in October 2017 in Dallas, Texas to showcase how they can partner with other EMS professionals. With a plethora of products to choose from, there is no doubt CyberLock can help EMS professionals secure their assets.
