

Corvallis, Oregon – CyberLock, Inc., a global leader in key-centric access control solutions has been awarded the WFX New Product of the Year for CyberKey Flash, an intuitive smart key that can access three different types of access control technologies; CyberLock, FlashLock, and CyberLock Flex. A customizable, three-button user interface with a bright OLED display allows users to navigate access modes, and view key events, expirations, and battery status. The latest in Bluetooth technology enables convenient updating of access schedules and lock permissions in the field via a Bluetooth-enabled smartphone or tablet.

CyberLock is a key-centric system that delivers full-featured access control to every locking point in a facility. An ideal solution for both retrofitting existing mechanical locks and installing in new doors and enclosures, CyberLock's extensive catalog of electronic cylinders is compatible with over 380 different mechanical lock designs.

The FlashLock access control system uses serial optical communications technology in connection with a web-enabled handheld device, such as a smartphone or tablet, to grant and receive access to FlashLock entry points.

The CyberLock Flex System is an integrated security solution that combines all the benefits of a traditional hardwired access control system with the versatility of the CyberLock key-centric access control solution, all managed under one unified software platform.

The CyberKey Flash is the first key of its kind that can seamlessly operate locking devices from all three of these access control systems: CyberLock electronic cylinders, CyberLock Flex RFID readers, and smartphone-compatible FlashLock entry points. Additionally, an intuitive software interface manages access schedules for each user, providing complete control over every locking device in the system. CyberKey Flash is an ideal solution for worship facilities in need of key control at a variety of access points.

The WFX New Product Awards are a leading national annual awards program, recognizing manufacturers of products that stand out as a benefit to churches of all sizes and styles. Finalists and winners each year are determined by a group of distinguished individuals working within the house of worship market. The New Product Awards winners for 2018 were selected by a panel of 15 judges, each of whom currently works for a house of worship.
