

Corvallis, Oregon (February, 2022) – CyberLock Inc., the global leader in key-centric access control, announces the Flex II FlashReader Keypad. The FlashReader Keypad is a multi-credential input device for the CyberLock Flex System II wired access control system.

The FlashReader Keypad has six different credential types: RFID cards, CyberLock's Flash Technology, access numbers, IR via fobs or CyberKeys, or Bluetooth 5.0 using the CyberAccess app. With multiple ways to gain access, administrators can easily give temporary or long-term scheduled access.

Users can use CyberAccess to gain hands free access into the FlashReader Keypad. The CyberAccess app notifies the users when a door come in range and the user can tap the notification to open the door or CyberAccess can automatically open the door if hands-free access is enabled.

CyberLock is proud to meet the needs of customers all over the world. With over 20 years in security industry, CyberLock is a trusted name in access control.
