

Corvallis, Oregon (February, 2021) – CyberLock, Inc., a global leader in key-centric access control solutions, announces the release of the ValidiKey Ring. The ValidiKey Ring is an optional addition to the ValidiKey Vault that is designed to bring key management to mechanical keys. ValidiKey Ring has the form factor of a CyberKey tip, with an attached keyring for mechanical keys.

The ValidiKey Ring allows users to check out mechanical keys from a ValidiKey vault in the same manner as CyberKeys. ValidiKey Rings can be 'grouped' meaning copies of mechanical keys may each be attached to a different ValidiKey Ring. This allows multiple people to be able to check out one of the ValidiKey Rings with that particular mechanical key.

Rings are tracked just like CyberKeys. They let administrators know who checked them out and when they returned them. Email notifications can be sent out to users when a ValidiKey Ring is late or not returned with expired missions within CyberAudit-Web.

CyberLock is proud to meet the needs of customers all over the world. With over 20 years in security industry, CyberLock is a trusted name in access control. For more information on CyberLock's ValidiKey Ring or the CyberLock system in general, visit www.cyberlock.com or give us a call at 541-738-5500.
