

CyberLock[®]

Key Centric Access Control

**PARKING
SECURITY**

Protecting Parking Assets

The parking industry faces unique security challenges due to a large inventory of dispersed, stand-alone meters and kiosks. Both internal and external theft represent significant costs for parking management companies and municipalities. Finding the correct lock will secure parking assets and hold parking enforcement and service workers accountable.

Remote Access

Securing remote parking meters and other assets in parking lots or garages can present difficulties due to the limitations in supplying power to these locations. CyberLock smart keys provide all the power to the lock cylinder so there is no need for hardwiring.

Secure

CyberLock cylinders can be programmed to deny access in the case of a lost or stolen key. An expiration date can be assigned to a key to deny access until updated in the CyberAudit-Web (CAW) software.

Tamper Resistant

Unlike mechanical locks, CyberLock cylinders have a unique, sealed design that negates standard lock picking techniques and vandalism. Once installed, cylinders resist forced rotation and are designed to remain in the locked position if tampered with.

What Can You Do with the Power of CyberLock?

Parking management companies face problems with theft and employee accountability. Using mechanical keys is not a suitable security solution because they lack the ability to record audit trails of who accessed parking meters and at what time.

CyberLock smart locks and smart keys record every access attempt, successful or not.

CyberLock keys can be quickly deactivated or programmed with an expiration date if a key happens to get lost or stolen.

CyberLock smart keys and smart locks help restrict and track access to on-street revenue pay stations, parking meters, and kiosks.

Parking companies can reduce internal fraud by programming each employee's key with the specific access privileges they need to carry out job duties.

CyberLock keys cannot be duplicated due to the unique key ID code, eliminating unauthorized key duplication and theft.

With the CyberLock system, keys can be programmed with personalized access permissions and expiration schedules ensuring employees only open their assigned meters or kiosks.

How Does CyberLock Work For You?

Locks

Ensuring parking meters and kiosks are secure against unauthorized entrants is highly important. The CyberLock cylinder is a high security electronic lock designed to track and control access throughout facilities. CyberLock cylinders can be installed without power or network cables*, making them the ideal solution for securing remote and mobile assets.

Communicators

Communicators provide the interface between CyberLock hardware and CyberAudit-Web management software. Key information is uploaded into the software and new schedules and permissions are downloaded into the keys through a communicator.

Keys

Programmed with access permissions for each user, the CyberKey serves as gatekeeper for the CyberLock system by approving or denying entry. The CyberKey provides power to energize CyberLock cylinders. Additionally, with detailed access reports and customized schedules that can be updated in the field, CyberKey smart keys offer administrators unparalleled control.

Software

CyberAudit-Web manages CyberLock systems of all sizes. The software allows users to assign keys, set key expiration dates, add new cylinders, monitor staff and contractors, create access schedules, and generate audit trails and custom reports.

* Flex Integration Option: The CyberLock Flex System is a modular integrated security solution that combines the benefits of a hardwired security solution with CyberLock's key-centric access control solution, all managed under one unified software platform.

CyberLock, Inc. is the leading supplier of key-centric access control systems. It is part of the Videx family of companies with roots dating back to 2000 when the first CyberLock branded locks and smart keys were introduced to the market.

Videx, Inc. has been designing and manufacturing innovative electronics since the company was founded in Corvallis, Oregon in 1979. Early products included display enhancement modules for Apple computers. In 1985, Videx entered the data collection industry with its first portable bar code scanner. Over the years, additional data collectors have been introduced, utilizing touch memory button and RFID tag technologies.

In 2013, CyberLock, Inc. was spun off as an independent company but maintains strong ties to Videx. The two companies continue to collaborate on future innovations.
