

**BANK  
SECURITY**

# Protecting Banking Assets

Financial institutions face unique challenges in securing assets such as vaults, deposit safes, cabinets, and drawers that may contain money and personal customer information. An access control solution that records who accessed which entry points and at what time is a necessary security measure to protect banking assets and customer records.

## Secure

CyberLock cylinders can be programmed to deny access in the case of a lost or stolen key. An expiration date can be assigned to a key to deny access until updated in the CyberAudit-Web software.

## Attack Resistant

Unlike mechanical locks, CyberLock cylinders have a unique, sealed design that negates standard lock picking techniques.

## Controlled Access

With numerous employees and members of the public coming and going on a daily basis, controlled access is necessary to prevent unauthorized entry. CyberLock keys are programmed with personalized permissions for each user, enabling immediate and precise control over who has access to entry points and at what time.

# What Can You Do with the Power of CyberLock?

It is the bank's responsibility to protect the critical assets entrusted to them by customers with an access control system that shows a record of who accessed which entry point and at what time.

CyberLock smart keys can be quickly deactivated or programmed with an expiration date in the event a key is lost or stolen.

CyberLock cylinders can be easily retrofitted into existing hardware in minutes, without hardwiring.

CyberLock provides administrators the ability to program custom access privileges for employees to carry out their job duties.

A record of every access attempt, whether successful or not, can be viewed in the CyberAudit-Web software.

The unique CyberKey smart key is designed to prevent unauthorized duplication of the key ID code.

# How Does CyberLock Work For You?

## Locks

Ensuring banking assets are safe and secure from unauthorized entrants is the highest priority. The CyberLock cylinder is a high security electronic lock designed to track and control access throughout facilities. CyberLock cylinders can be installed in minutes without power or network cables\*, making them the ideal solution for securing remote and mobile assets.

## Communicators

Communicators provide the interface between CyberLock hardware and CyberAudit-Web management software. Key information is uploaded into the software and new schedules and permissions are downloaded into the keys through a communicator.

## Keys

Programmed with access permissions for each user, the CyberKey serves as gatekeeper for the CyberLock system by approving or denying entry. The CyberKey provides power to energize CyberLock cylinders. Additionally, with detailed access reports and customized schedules that can be updated in the field, CyberKey smart keys offer administrators unparalleled control.

## Software

CyberAudit-Web manages CyberLock systems of all sizes. The software allows users to assign keys, set key expiration dates, add new cylinders, monitor staff and contractors, create access schedules, and generate audit trails and custom reports.

\* Flex Integration Option: The CyberLock Flex System is a modular integrated security solution that combines the benefits of a hardwired security solution with CyberLock's key-centric access control solution, all managed under one unified software platform.

CyberLock, Inc. is the leading supplier of key-centric access control systems. It is part of the Videx family of companies with roots dating back to 2000 when the first CyberLock branded locks and smart keys were introduced to the market.

Videx, Inc. has been designing and manufacturing innovative electronics since the company was founded in Corvallis, Oregon in 1979. Early products included display enhancement modules for Apple computers. In 1985, Videx entered the data collection industry with its first portable bar code scanner. Over the years, additional data collectors have been introduced, utilizing touch memory button and RFID tag technologies.

In 2013, CyberLock, Inc. was spun off as an independent company but maintains strong ties to Videx. The two companies continue to collaborate on future innovations.
