Corvallis, Oregon (September 2025)—CyberLock, Inc., a leading innovator of access control solutions, is thrilled to be recognized by *Security Today* with two New Product of the Year awards. CyberLock has won numerous New Product of the Year awards to date, especially for the globally recognized key-centric systems they pioneered in 1999.

CyberLock is pleased to share that *Security Today* magazine has honored both the ValidiKey Pro and CyberAudit Enroller with their New Product of the Year award. The ValidiKey Pro won in *Security Today*'s Access Control Devices/Peripherals category, and CyberAudit Enroller won in the User Authentication/Identification/Credentialing and Management category. *Security Today* annually considers manufacturers for New Product of the Year, highlighting products that have shown significant capabilities in improving security.

The ValidiKey Pro key control cabinet is designed to program and dispense up to 20 CyberKeys that are securely stored in an unprogrammed state until an approved credential is presented. With an enhanced RFID reader, the ValidiKey Pro supports a wide range of credential types, including infrared, Bluetooth, and NFC. Numerous cabinets can communicate within a single CyberAudit® Enterprise system, allowing for control over a large number of keys. The ValidiKey Pro is unique in its ability to store both smart and mechanical keys, distributing the correct key for an authorized user. This innovative solution allows users to safely and easily monitor the keys in their system, taking control over entry to essential access points.

CyberLock's CyberAudit Enroller conveniently facilitates the enrolling and updating of multiple credential types directly into CyberLock's software suite, CyberAudit-Web, via a USB connection and CyberLink 2 software. CyberAudit Enroller supports a wide range of RFID cards, including MIFARE® DESFire® EV3 encrypted cards. An infrared sensor programs and updates Generation 2 CyberKey® smart keys and CyberLock's extensive collection of keyless locks. The CyberAudit Enroller is the only device needed to program and update all types of access credentials in a CyberLock system, vastly simplifying their management.

With a trusted name built over 25 years in the security industry, CyberLock proudly serves customers around the world, meeting needs across numerous applications. For more information about the ValidiKey Pro, CyberAudit Enroller, or the CyberLock access control system in general, please visit www.cyberlock.com or give us a call at 541-738-5500.
