

Las Vegas, NV (March 2026)—CyberLock, Inc., a global leader in key-centric access control, was recognized by the Security Industry Association (SIA) as an awardee at the 2026 SIA New Products and Solutions (NPS) Awards, the flagship awards program presented in partnership with ISC West recognizing innovative security products, services and solutions.

CyberLock was selected as the 2026 winner of the Lock and Key Solutions category for its CyberKey Blue 4 and honored during an award ceremony on the Bridge Stage of the ISC West show floor.

CyberLock's new smart key, CyberKey Blue 4, introduces enhanced durability, improved Bluetooth capabilities, and a USB-C port to bring a new level of versatility and convenience to keyless access control. Dual-factor verification is made available using our CyberAudit Link mobile app, pushing the boundaries of what is possible with key-centric access control. This provides an even greater level of protection for critical, high-security access points. CyberKey Blue 4 excels in industrial, remote, and widespread deployments, especially with the valuable accountability brought by reliable, real-time audit reporting.

"SIA applauds all the awardees in this year's SIA NPS Awards," said SIA CEO Don Erickson. "The NPS program highlights the most innovative security products available today, and it remains the most trusted awards program for presenting new security technology solutions in large part due to the support, expertise and extensive consideration of our judges."

Since its inception in 1979, SIA NPS has been the security industry's premier product awards program. New products are reviewed by a panel of judges with extensive industry experience, and in 2026, following significant deliberations, the 38 judges presented awards for technologies covering 23 product and service categories.
